

Henrik Bjørn Nielsen

Associate Professor,
Technical University of Denmark
CSO Clinical-Microbiomics, Denmark

Biography

H. Bjørn Nielsen, PhD, Chief Scientific Officer at Clinical-Microbiomics A/S, has since 2008 been a frontrunner in the field of microbiome research. His most recent work includes a three-pronged association study that links the microbiome, serum metabolome and insulin sensitivity in none-diabetics, and a study of transcriptional interactions among gut microbes.

Furthermore, Bjørn was the driving force behind the metagenomic species concept that together with the human gut microbiome gene catalogues effectively have uncovered the dark-matter of microbiomics.

After 16 years in academic research Bjørn is now leading the research and innovation in Clinical-Microbiomics A/S, a contract research organisation that provide custom-tailored microbiome analysis.
