

**Louise Jopling**

Director of Immunology Scientific Innovation  
Johnson & Johnson

Louise is Director of Immunology Scientific Innovation at the Johnson & Johnson Innovation Centre London. Her main responsibilities are to apply the highest level of scientific expertise and insights to identify the best opportunities for value-generating collaborations, and support development of an industry-leading portfolio of investment opportunities across Europe.

Prior to this Louise held a number of positions at Janssen in the Medical Affairs function with both UK and European responsibility within the Immunology Therapy Area.

Louise joined Janssen in May 2008 following a successful research career in both academia and industry. After completing her PhD in Immunology (Imperial College London), Louise undertook a post-doctoral fellowship at Harvard Medical School (Boston). From there Louise worked at Celltech/ UCB for 6 years as a senior pharmacologist, where she was responsible for developing and testing pre-clinical models of inflammatory disease, and was responsible for leading the psoriasis research strategy.
