

Anja Schmidt-Christensen

Anja Schmidt-Christensen is a senior researcher and Associate Professor in the group of Diabetic Complications at the clinical Research Center (CRC) and Lund University diabetes Center (LUDC) in Malmö.

Anja has been working with chronic inflammation and fibrosis specifically in relation to diabetes for many years. She is implementing multimodal imaging approaches and state-of-the art imaging techniques like intra-vital and synchrotron-based imaging to get a better understanding of the pathophysiology and heterogeneity of e.g. diabetic kidney disease and to find new biomarkers of disease and determine the impact of therapeutic regimes targeting inflammation and fibrosis.
